Remote, hybrid, willing to relocate

ENGINEERING

6.5 cumulative years
Professional since April 2019

CLINICAL

15 years CBT
NHS and private practice

Systems-oriented software engineer with 6.5 cumulative years of professional experience since April 2019. I turn manual or ambiguous work into observable workflows using APIs, TypeScript, Python, agent tooling, data pipelines, and practical interfaces, while keeping human approval explicit where judgment or risk remains.

My recent focus has been agentic systems, evaluation, guardrails, and provider-agnostic delivery. I work across discovery, architecture, implementation, deployment, documentation, and live support, and I am comfortable tracing how information moves between tools rather than treating each tool in isolation.

SELECTED AUTOMATION SYSTEMS

Halo - agent infrastructure. Built a Node.js gateway over the Claude Agent SDK, containerised runners, and a 27-module Python tool layer for memory, work tracking, briefing synthesis, and integrations. Used NATS JetStream event sourcing and Kubernetes with Grafana and Prometheus.

Jeany - content-to-intelligence pipeline. Combined Python services, a Next.js dashboard, and a Go CLI with Kubernetes, Helm, Terraform, and ArgoCD to move information through an inspectable delivery pipeline.

Sortie - ensemble AI code review. Runs Claude, Codex, and Gemini reviews in parallel, synthesises their findings, and can gate merge on convergent severity. TypeScript, Bun.

The Pit - agent evaluation and cost visibility. Built structured multi-agent contests with traces, rubric scoring, failure tags, and per-run microdollar cost accounting. Next.js, TypeScript, PostgreSQL, Stripe.

WORKFLOW DELIVERY

Loans by MAL - regulated UK lender, contract. Converted regulatory and operational concerns into a fail-closed conversational workflow. An LLM proposed each turn, deterministic code enforced hard boundaries, sensitive cases routed toward human handling, and every result retained an audit trace. Vue, TypeScript, Node.js, Zod, Terraform, AWS.

Becoming Diamond. Delivered a member workflow spanning content, profiles, an AI chat assistant, Stripe payments, and a git-based CMS that allowed the client to make routine content changes without an engineer.

EXPERIENCE

Oct 2024-present | Software Engineer | Oceanheart.ai, independent. Built client products, agent tools, evaluation workflows, integrations, deployment systems, and operational handoffs.

May-Jun 2026 | Full Stack Engineer | Loans by MAL, contract. Delivered the regulated conversational workflow end to end and presented technical direction to C-suite stakeholders.

Nov 2023-Mar 2024 | Software Engineer | EDITED, retail analytics. React, TypeScript, Python, data visualisation, and enterprise API integrations.

Jun 2021-Nov 2023 | Software Engineer | Brandwatch. Greenfield enterprise product work, scalable React components, legacy modernisation, and junior mentoring.

Sep 2020-Feb 2021 | Full Stack Engineer | Telesoft Technologies. TypeScript, Angular, Node.js, Express, and secure cybersecurity features.

Mar 2020-Aug 2020 | Web and Frontend Developer | Appius. CMS modules, customer portals, REST integrations, and responsive interfaces.

Apr 2019-Mar 2020 | Software Developer | School Business Services. Vue.js front end for school financial-management software.

EDUCATION AND TECHNICAL

EDUCATION

PGDip Cognitive Behavioural Therapy -
Royal Holloway, University of London

PGCert Primary Mental Healthcare -
University of Central Lancashire

BSc Psychology - UWE Bristol

TECHNICAL

Automation and agents: tool-layer architecture, APIs, agent orchestration, guardrails, evaluation, trace evidence, cost and token accounting

Languages and data: TypeScript, Python, Go, Bash, Node.js, FastAPI, REST APIs, PostgreSQL, NATS

Operations: AWS, Terraform, Docker, Kubernetes, GitHub Actions, ArgoCD, Grafana, Prometheus
