ENGINEERING

6+ professional years
Product and AI delivery

CLINICAL

15 years CBT
NHS and private practice

I turn ambiguous, high-consequence work into AI-supported systems that people can trust and operate without depending on me. I start with the people and the process: where time, risk, and rework accumulate; whether the answer should be AI, deterministic automation, or a process change; and what evidence would show that it worked. Then I take the smallest useful intervention through architecture, production, measurement, and handoff.

I bring more than six years of professional software delivery and fifteen years of CBT practice across the NHS and private work. Recent work includes a fail-closed conversational engine for a regulated lender, agent evaluation and review systems, and client platforms operated independently by non-technical owners.

■ SELECTED DELIVERY

Loans by MAL - regulated UK lender, contract (2026). Delivered a customer-facing conversational system solo, from first conversation to working system in four weeks. The model produced a structured proposal for each turn; deterministic code enforced hard compliance boundaries before anything reached a customer. Credentials and vulnerability cases routed to a human, and every turn entered an audit trace. Hardened the system against adversarial, confused, oversharing, and vulnerable personas before happy-path testing. Defined scope across concurrent epics and presented technical direction to C-suite stakeholders. Vue, TypeScript, Node.js, Zod, Terraform, AWS.

Becoming Diamond - coaching business (2025). Took the product from brief to revenue-ready: an animated marketing site and gated member portal with course content, AI chat, profiles, Stripe payments, and a git-based CMS. The client can update routine content without booking an engineer. Next.js, React 19, TypeScript, Tailwind, Stripe.

Swanage Traffic Alliance - community campaign (2025). Built the registration and campaign platform for a local traffic consultation. Non-technical volunteers run the administration flow without engineering support. Astro, React, Vercel.

■ AI-NATIVE WORKING PRACTICE

Sortie - ensemble AI code review. Sends the same diff independently to Claude, Codex, and Gemini, then uses a fourth pass to compare the findings. Convergent findings can block a merge on severity; single-model findings remain visible without becoming automatic blockers. Across six runs on a shipping codebase, 76.9 percent of findings appeared in only one review. One of those findings was a committed API key. TypeScript, Bun.

The Pit - agent evaluation and cost visibility. Runs structured contests between agents, retains an observable trace for each run, scores against explicit rubrics, tags failures, and records per-run cost down to microdollars. It answers three practical questions about a change: did quality move, what broke, and what did it cost? Next.js, TypeScript, Postgres, Stripe.

I use coding agents behind review gates in daily delivery. I own the problem framing, architecture, constraints, review, verification, and delivery decisions. I remain accountable for deciding whether the output is correct and safe to ship, regardless of who typed each line.

■ EXPERIENCE

Oct 2024-present | Software Engineer | Oceanheart.ai, independent. Client-facing delivery across process discovery, product engineering, applied AI, evaluation systems, deployment, support, and operational handoff.

May-Jun 2026 | Full Stack Engineer | Loans by MAL, contract. Delivered the regulated conversational system above across Vue and TypeScript front end, Node.js and TypeScript backend, shared Zod contracts, deterministic safety validation, and Terraform on AWS.

Nov 2023-Mar 2024 | Software Engineer | EDITED, retail analytics. Built React, TypeScript, and Python data-visualisation features and enterprise API integrations for an AI-driven retail analytics product.

Jun 2021-Nov 2023 | Software Engineer | Brandwatch, social intelligence. Built a greenfield enterprise data-visualisation platform in a team of five, modernised legacy Backbone code, and mentored junior developers.

Sep 2020-Feb 2021 | Full Stack Engineer | Telesoft Technologies, network security. Built secure cybersecurity application features using TypeScript, Angular, Node.js, and Express.

Mar-Aug 2020 | Web and Frontend Developer | Appius. Built CMS modules, customer portals, REST integrations, and responsive interfaces using .NET, JavaScript, and Vue.js.

Apr 2019-Mar 2020 | Software Developer | School Business Services. Built Vue.js interfaces for school financial-management software.

2004-present | Cognitive Behavioural Therapist | NHS and private practice. Worked across NHS and private practice; maintain a small private caseload alongside engineering.

■ EDUCATION AND TECHNICAL

EDUCATION

PGDip Cognitive Behavioural Therapy
- Royal Holloway, University of London

PGCert Primary Mental Healthcare -
University of Central Lancashire

BSc Psychology - UWE Bristol

TECHNICAL

AI engineering: agent and tool-layer architecture, evaluation harnesses, guardrails, fail-closed safety design, provider-agnostic multi-model pipelines, adversarial persona simulation, cost and token accounting

Languages: TypeScript, Python, Go, Bash

Product engineering: React, Next.js, Vue, Node.js, FastAPI, REST APIs, PostgreSQL, NATS

Cloud and delivery: AWS, Terraform, Docker, Kubernetes, Vercel, GitHub Actions, Grafana, Prometheus

Enablement: process discovery, scoping, C-suite communication, regulatory translation, production deployment, measurement, live support, operational handoff
