ENGINEERING

More than six years

Product and client delivery

APPROACH

Discover, build, verify

Clear communication

Software engineer with more than six years across product teams, client delivery and independent development. Combines hands-on engineering with structured discovery and clear communication, turning user problems into practical software and workflow improvements. Recent work includes applied AI, integrations and verification of automated behaviour; earlier clinical practice developed disciplined listening and communication under uncertainty.

SELECTED ENGINEERING AND CLIENT DELIVERY

Commercial product engineering - Brandwatch and EDITED. Built data-visualisation features for enterprise software, modernised legacy interfaces and worked with backend colleagues on API integrations. At Brandwatch, contributed to a greenfield platform in a team of five and mentored junior developers. React, TypeScript, Python.

Loans by MAL - Full Stack Engineer, contract (May-Jun 2026). Scoped and delivered a conversational system over roughly one month, translating regulatory constraints into implementation decisions and presenting technical direction to C-suite stakeholders. Built a Vue/TypeScript front end, Node.js backend and shared Zod contracts, with deterministic checks on model proposals, audit traces and human escalation. Delivery covered internal development and UAT.

Oceanheart Studio - independent product development (2026). Building practice-management software that brings client and service management, conflict-safe appointment scheduling and enquiry-to-booking conversion into one workspace. Includes role-based access, client booking history and retained appointment terms. Next.js, TypeScript, WorkOS, Convex.

LoanSlam - AI lending-conversation test harness. Built an evaluation environment using 122 hostile synthetic scenarios to investigate unsafe model proposals. Combined structured LLM output, deterministic validation and inspectable traces; replaced manual runs with a simulator and compared groups of variants to handle stochastic variability.

EXPERIENCE

Oct 2024-present | Software Engineer | Oceanheart.ai, independent. Client-facing scoping, product delivery, integrations and applied-AI development. Built customer portals and workflows for non-technical users, including a coaching member portal with payments and editable content, and a community registration platform.

May-Jun 2026 | Full Stack Engineer | Loans by MAL, contract. Roughly one-month engagement alongside independent work; client discovery, implementation and UAT as described above. Vue, TypeScript, Node.js, Zod, Terraform, AWS.

Nov 2023-Mar 2024 | Software Engineer | EDITED. React, TypeScript and Python data-visualisation features, plus enterprise API integrations with the backend team for a retail analytics SaaS product.

Jun 2021-Nov 2023 | Software Engineer | Brandwatch. Greenfield enterprise data-visualisation platform, reusable React components, legacy Backbone modernisation and junior mentoring.

Sep 2020-Feb 2021 | Full Stack Engineer | Telesoft Technologies. Secure cybersecurity application features using TypeScript, Angular, Node.js and Express.

Mar-Aug 2020 | Web Developer, then Frontend Developer | Appius. CMS modules, customer portals, REST integrations and responsive interfaces using .NET, JavaScript and Vue.js.

Apr 2019-Mar 2020 | Junior Software Developer, then Software Developer | School Business Services. Vue.js interfaces for school financial-management software.

2004-2026 | Cognitive Behavioural Therapist | NHS and private practice. Structured inquiry, careful listening and clear communication under uncertainty; maintained a small private caseload alongside engineering.

TECHNICAL AND COLLABORATIVE SKILLS

Engineering: TypeScript, Python, Go, React, Next.js, Vue, Node.js, FastAPI, REST APIs, PostgreSQL, shared contracts and integrations.

Applied AI and verification: LLM APIs, evaluation harnesses, structured outputs, deterministic guardrails, trace inspection, adversarial simulation and Playwright checks.

Delivery: AWS, Terraform, Docker, Kubernetes, Vercel and GitHub Actions.

Working with people: discovery, scoping, stakeholder communication, translating constraints into engineering decisions, mentoring and enabling non-technical users.

EDUCATION

PGDip Cognitive Behavioural Therapy (Merit) - Royal Holloway, University of London

PGCert Primary Mental Healthcare (Merit) - University of Central Lancashire

BSc Psychology (2:1) - UWE Bristol
