

Richard Hallett

Customer Service and Operations

Swanage, Dorset | 07375 862225 | kai@oceanheart.ai

Profile

I have worked directly with people for most of my career, first in NHS and private mental healthcare, then in software teams and independent client work. Those roles have required calm communication, sound judgement, careful organisation and personal responsibility for seeing work through. I have also mentored junior colleagues and delivered services for people with very different needs and levels of confidence.

I am now looking to bring that experience into a practical local role where dependable service, teamwork and attention to day-to-day standards matter.

Relevant strengths

- Clear and respectful communication with customers, clients and colleagues
- Organising competing work, following procedures and completing agreed tasks
- Supporting colleagues through mentoring, explanation and constructive feedback
- Assessing problems calmly and making decisions within professional boundaries
- Accurate work with sensitive information and digital systems
- Based in Swanage, with the right to work in the UK and no notice period

Experience

Independent engineer and client delivery | Oceanheart.ai

October 2024 to May 2026

- Managed small client and community projects from the initial brief through delivery, support and handover.
- Kept clients informed, explained technical choices in plain language and adapted the work for people who were not technical specialists.
- Built a registration and campaign system for Swanage Traffic Alliance, with an administration process that local volunteers could use without ongoing technical help.

Cognitive behavioural therapist | NHS and private practice

2008 to 2026, across permanent, contract and part-time work

- Delivered one-to-one and group services for people with a wide range of needs.
- Conducted assessments and clinical triage, then agreed a clear course of work with each person.
- Worked within professional standards while handling sensitive information and emotionally demanding situations.
- Maintained professional accreditation alongside later work in software.

Software engineer | EDITED

November 2023 to March 2024

- Worked in a small team on a retail analytics product, building user-facing features and coordinating with backend colleagues on client integrations.
- Balanced new work with the maintenance of an existing product and worked to short delivery deadlines.

Software engineer | Brandwatch

June 2021 to November 2023

- Worked in a team of five on a new enterprise product and collaborated with colleagues across different disciplines.
- Took responsibility for features from initial discussion through delivery and later maintenance.
- Mentored junior developers and explained unfamiliar work in a clear, supportive way.

Earlier software roles

2019 to 2021

Software Developer at School Business Services, Web Developer at Appius and Full Stack Engineer at Telesoft Technologies. These roles involved customer portals, financial software for schools, secure systems and work within established team processes.

Education

- PGDip Cognitive Behavioural Therapy, Royal Holloway, University of London, Merit
- PGCert Primary Mental Healthcare, University of Central Lancashire, Merit
- BSc Psychology, University of the West of England, 2:1
- A levels in Computing, Psychology and Biology
